Fix an Oraxen glyph that is clipped above a menu title

A font glyph can exist in the pack while being cropped in a title. Check its height and ascent together before changing the menu plugin or replacing the whole resource pack.

Check the installed content

Oraxen combines server-side item definitions with client resource-pack assets. Check the installed release before copying a recipe or component example, because Minecraft item formats have changed between releases. Work on a staging copy for changes that affect existing player items.

Work through the change

1. Locate the affected glyph definition and its image. Record its height, ascent and the context where clipping occurs, such as chat, a title or an inventory menu.
2. Compare the glyph with the installed-release font reference. The documented height must be at least the ascent; also check the image canvas and transparent padding.
3. Change a copied glyph on staging and generate the matching pack. Test it in ordinary chat first, then in the exact menu that showed the clipping.
4. Try the normal supported client versions and GUI scales. Keep a screenshot of each comparison so a vertical offset is distinguishable from a missing character or missing pack.

Verify the result

The whole glyph should be visible in its intended context without pushing other text beyond the usable area. Ordinary text in the same menu should remain readable.

If the result differs

If chat works but the menu does not, check that menu integration against your Paper and Oraxen versions. Current docs describe version-dependent GUI packet requirements; adding an outdated packet dependency can introduce another failure.

Keep a recovery path

Restore the previous glyph measurements and generated pack together if the layout worsens. Keep the original image file so you can compare padding without changing the glyph identifier used by menus.
