Separate EconomyShopGUI menu access from bulk-selling permission

Players may need to browse a shop without access to a bulk sell command. Treat command access and item access as separate permissions so one convenience feature does not expose every selling route.

Before you start

EconomyShopGUI distinguishes shop items, sections and permissions. Free and Premium releases expose different options, so check the documentation for your installed edition. Test ordinary players and a single section before sharing a change across the shop.

Work through the check

1. Decide which player group may browse, purchase and use each selling command, then record the currently inherited permissions.
2. Consult the current permissions page for your edition and identify the specific command nodes and default grants. Absence of an explicit grant may not mean access is denied.
3. Change one documented command permission for a test group and keep section and item permissions unchanged.
4. Log in as a normal member of that group, test the menu and try the restricted selling feature with a single inexpensive item.

Confirm the result

The group should retain the intended menu access while the restricted command is refused. Allowed purchases and sales should still obey each listing’s existing restrictions.

If the result differs

An inherited permission, operator status or a different plugin owning the same alias can explain an unexpected result. Check command ownership and effective permissions before editing more groups.

Recover safely

Restore the previous group setting if normal shop use is blocked. Apply a narrow documented permission change; do not solve a command conflict with a wildcard grant across every shop feature.

Documentation and related help

Check the EconomyShopGUI maintainer documentation and EconomyShopGUI maintainer reference against your installed release before applying changes.
